KEY PROJECTS

Employee Management System |JAN -JUL 2023

- Developed an application that stores details of an employee.
- Created a registration form using HTML/CSS to store details of employee into database using server.
- Retrieving the details and editing details as per requirement.
- JAVA, Servlets (JAVA SERVER PAGES) and used Platform Independent Environment.
- Resolving the issues

YumQuest iOS App |Sept – Dec 2023

- Developed an iOS application that allows users to rate the individual menu items of nearby restaurants.
- Utilized Map kit and Core Location to obtain app users' current location.
- Obtained extensive restaurant and menu data from Foursquare API.
- Stored users' ratings on Google Firebase so that the data can be synced with all users in real-time.

Random Advice iOS App (Personal Project) | JUNE-AUG 2020

- Created a single view application that gives the user random advice at the press of a button.
- Acquired the random advice data as a JSON from the Advice Slip API.
- Customized the background of the app to change color each time a new advice is displayed on the screen.

FBI Crime Data Analytics and Visualizations Web Application | March -May 2021

- Produced an interactive web application that allows users to observe and interact with FBI crime statistics.
- Implemented data interactivity by allowing users to select from several visualization tools.
- Distributed the project tasks to team members based on their strengths, weaknesses, and interests.
